

Fork Positioner for Forklifts

Fork Positioner for Forklift - A fork positioner is an apparatus constructed out of high quality materials meant to be able to endure the most difficult operations and work environments. This particular piece of equipment enables the individual driving to be able to work the forks hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more exact carrying and position in a quicker and much more effective manner.

The unique blade pocket design could enable the one operating it to safely swing the unit's blades without any fear of damaging the positioning cylinders. This could allow the worker the alternative to either perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into fork positioners on available units.
